

STEMscopes Curriculum Mapping User Guide

Feature Accessibility

Curriculum Mapping is available to administrators at the district level. Currently, only STEMscopes SYSADMINS and STEM Admins have access to this feature.

Functionality and Purpose

As a district-level management application, Curriculum Mapping allows administrators to select student learning materials, assessments, and other elements that teachers would typically select, then assign the selections to a specified date on the Curriculum Mapping calendar. Admins can then push these assignments to teacher sections and students. *Please note: this feature only allows for the selection of student materials at this time.*

Curriculum Materials are available for:

- Subscription licenses
- STEMscopes Science and Math curriculums

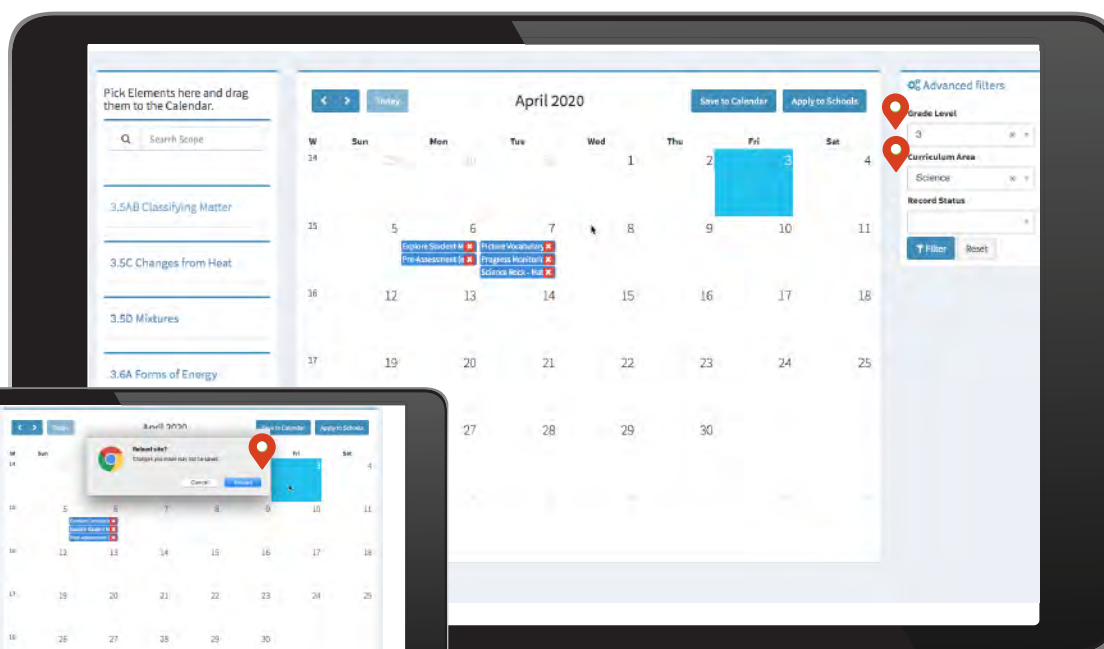

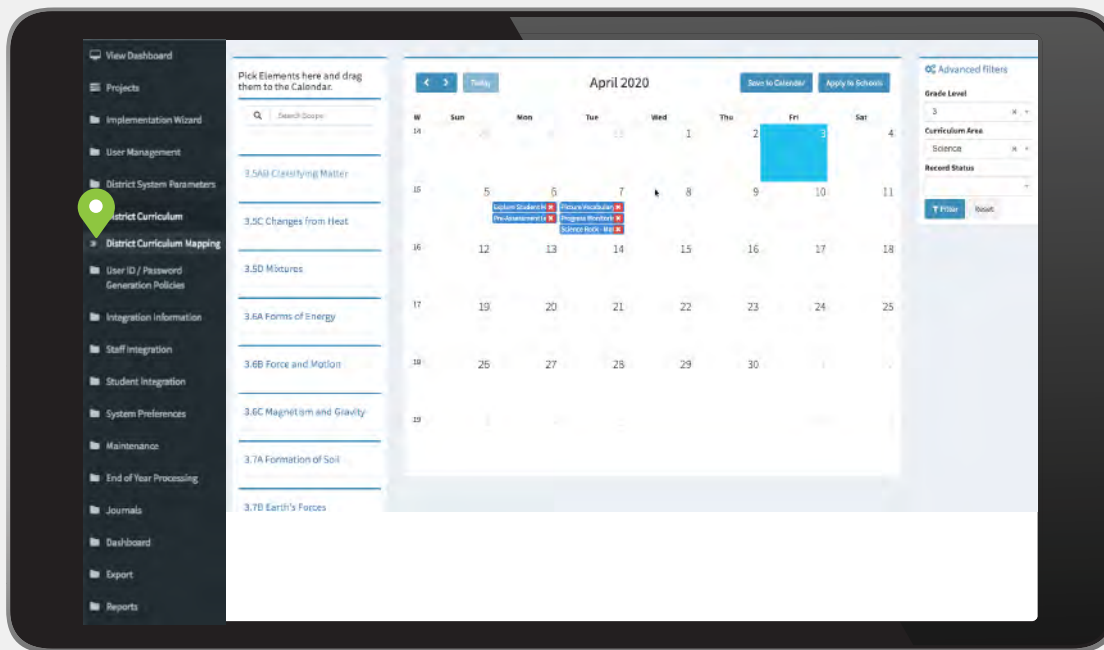

Curriculum Materials are designated for:

- Grade level
- Student elements only

Table of Contents

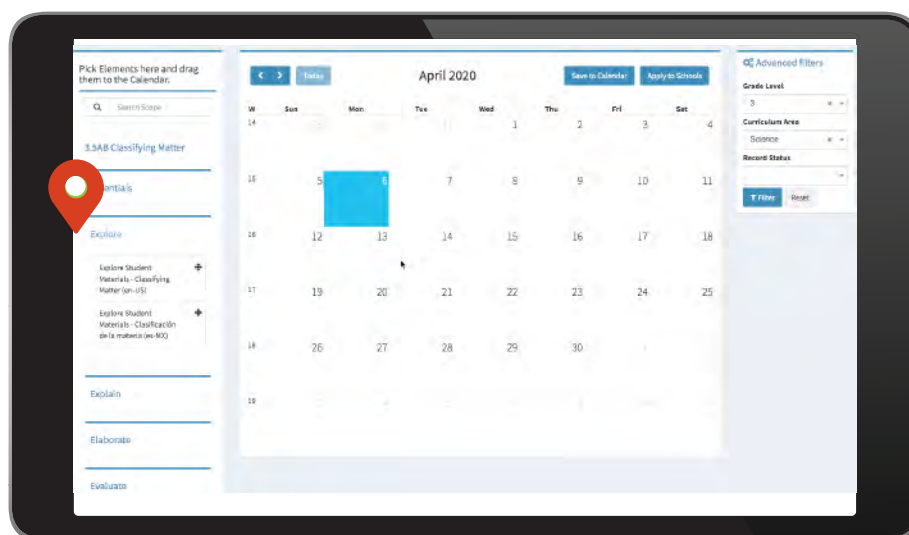

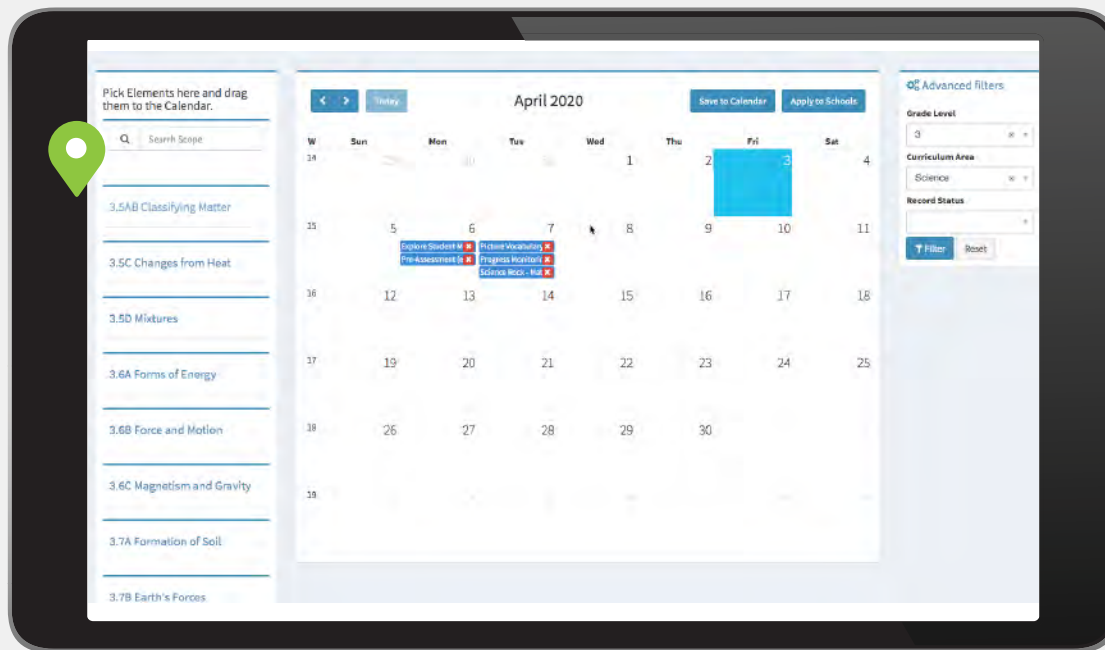

Page	Resource
2	District curriculum mapping navigation and search filters
3	Accessing a scope's elements and calendar assignment feature
4	Saving, pushing, and archiving school assignments
5	Student and teacher dashboard

Locate the  District Curriculum Mapping application. Once you've accessed the application, filter by the  Grade Level and Curriculum Area that you're working with.

 If you receive a **Reload site?** pop-up, click **Reload** to continue.

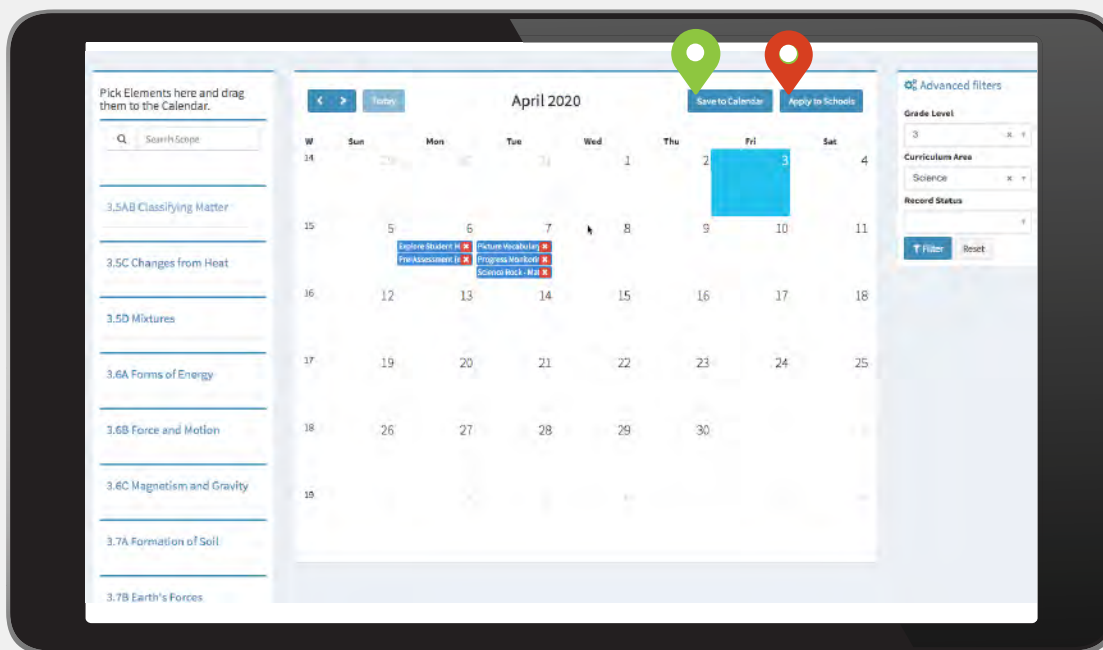

The  curriculum elements for each grade level will appear sequentially in the left menu bar. Next, click on the scope you want to access. The scope will expand to display its  5E elements.

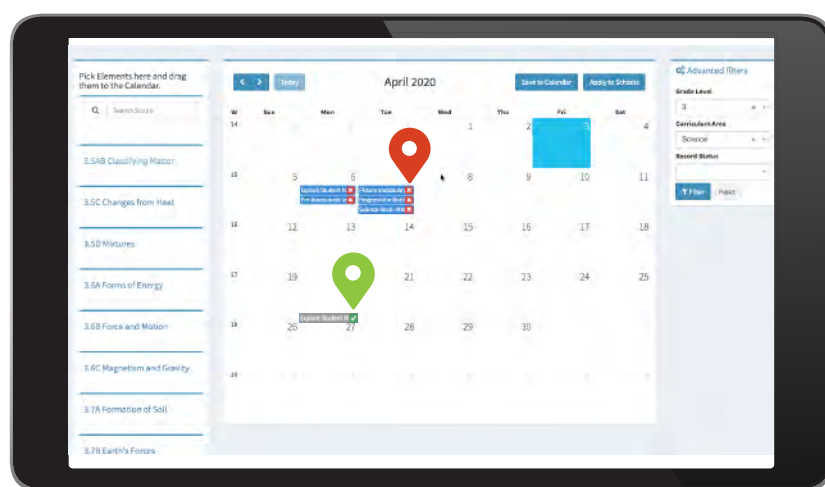

We selected the  **Explore** element to reveal the available student materials. You can then select resources to drag and drop into the calendar.

Repeat this process for all resources you want to push to students through teacher sections.

Click  **Save to Calendar** to save your work without pushing the materials to your teacher sections and students. Click  **Apply to Schools** to push curriculum materials to the teacher sections and students.

Important note: If you do not want to save your work, simply refresh the browser before clicking Save to Calendar. At this time, there is no option to delete a curriculum element.

  The **Archive Teacher Curriculum Element** option will remove an element from a teacher's section assignment area and place it in the teacher's section assignment *archive* area.

  This option moves a previously archived element back to a teacher's section assignment area.

The  student view and  teacher view are shown below. In both views, the “D” indicates an item assigned by the district
